

Ramp Width: 34"

Ramp Capacity: 800 lbs

ELECTRIC MINIBUS LOW FLOOR

Ram ProMaster 159 Ext. High Roof

Up to 10 passengers &
3 wheelchair occupants

150-200 mi. range w/ full charge
depending on driving conditions

Fully electric: 82 kw
battery - 400 volts

The world's first Class 2, low floor electric minibus.

Our fully electric RP Minibus has a motor that puts out 300 HP and 226 lb-ft of torque. The minibus retains much of its generous payload capacity; the motor can move the vehicle with plenty of power when loaded with passengers. The Minibus has a variety of range options, with different battery sizes the range varies from 150-200 miles on a full charge, depending on driving conditions. The 400V battery requires approximately 6 - 7 hours to charge with a standard J1772 Level 2 charger. With alternative charging ports and connector options, the vehicle is capable of DC fast charging with a CCS1 in 30 minutes or less using 200 kwh. The motor and battery of the vehicle are liquid cooled to keep the car running at optimum operating temperatures. The battery features active heating and cooling technology to maximize range and to keep the battery at optimum temperatures while in operation and while charging. Our Minibus range is further boosted with regenerative braking technology that can be adjusted on the fly. While competitors in the market average roughly .8 to 1.2 miles per kilowatt-hour, we've found that our Minibus more than doubles this range in repeated driving tests across several roads and different climate conditions.

ELECTRIC MINIBUS LOW FLOOR

Ram ProMaster 159 Ext. High Roof

The 159" WB Extended RP Minibus comes with rapid open and close electric dual-sliding plug doors that are designed to last through heavy-duty usage with a 150,000-mile transit lifecycle. This double-leaf plug style door provides passengers with the widest and tallest entrance of any vehicle in its class. Passengers entering the vehicle will also appreciate the lower first step height, pressure sensitive edge doors, manual or optional power ramp, and entrance assist handles that make passenger loading considerably safer. All the features above provide superb ambulatory access for passengers, creating the best in class transit solution.
